

We've changed our name!

Voyant **HEALTH**™

TraumaCad

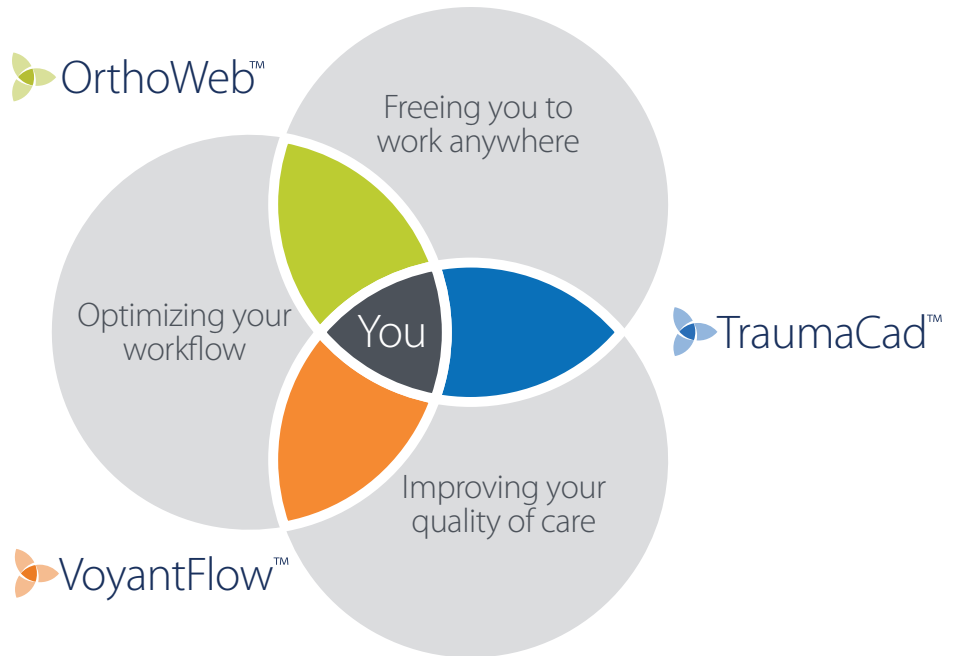

orthocrat

TraumaCad and Orthocrat
have new names.
Introducing **Voyant Health.**

It's all about you

Voyant Health has placed you at the center of our mission. Everyday we're focused on dramatically improving your work life, supporting your high-quality care, and giving you more time with patients. We do this by delivering integrated solutions for the clinic, the hospital, the operating room, and beyond.

We've changed our name to match our industry leadership in orthopedic pre-surgical planning and to express our upcoming innovations that will transform the way you work.

Integrated solutions

TraumaCad™

TraumaCad, our surgical planning solution, allows you to replicate every action you currently perform by tracing on x-ray films, only more conveniently and much faster. Using digital images, you can perform measurements, fix prostheses, simulate osteotomies, and visualize fracture reductions.

Built on a cloud

VoyantWeb is an innovative technology platform that ensures seamless integration of Voyant Health solutions and related applications with different back-end systems.

Powered by
VoyantWeb™

VoyantWeb allows surgeons to use planning and workflow tools from any computer—no need to purchase and install complex and monolithic software—making it widely accessible and affordable to use.

 OrthoWeb™

 VoyantFlow™

 VoyantMark™

OrthoWeb is a highly secure, web-based environment allowing you to bypass the technical issues often encountered when moving images outside the clinic. Patient images are uploaded from the clinic to your OrthoWeb account, giving you secure access to studies in order to template from home, the hospital, or the operating room.

VoyantFlow provides effortless distribution of your patients' images to exam rooms. Walk into the exam room, swipe a card, and *instantly* view the patient's images. Integrates with all PACS systems and saves you an hour each day.

VoyantMark is the world's first fully positionable orthopedic X-ray calibration and marking device. Designed specifically to work with TraumaCad™ surgical planning software, VoyantMark aids in accurately measuring patient anatomy.
